Here's Something New From Bendix/King

Bendix/King has long been associated with the words quality, reliability and especially innovation and user friendliness. Our new line of products will not only build on that heritage but push the boundaries on what modern avionics are all about. Everything Bendix/King produces is designed to increase situational awareness and make flying safer and easier. And, as always, all Bendix/King products are backed by a worldwide support organization dedicated to complete customer satisfaction.

KSN 770

Combining an IFR GPS navigator, integrated TAWS, weather radar display, a 16-watt digital VHF comm and VHF nav/ILS, Bendix/King's new KSN 770 multifunction display takes the place of up to four separate units. It features a large, high-resolution display and a sleek, ergonomic, intuitive design. The system also includes a comprehensive moving map and a fully certified 24-channel WAAS-LPV GPS navigator. But that's not the only technology separating the KSN 770 from less worthy systems.

Advanced Graphics

The KSN 770 showcases a full VGA high resolution screen with a larger display area than on previous models. It offers an excellent view of the latest Jeppesen electronic charts and maps, complete with an own-aircraft position overlay.

Unique GUI Interface

Based on the graphical user interface found on advanced business jets, our GUI enables graphical flight planning with a cursor control device so simple to use, flight planning and enroute navigation have never been easier.

Safety Display

The KSN 770 includes a complete set of safety system display options that include on board weather radar, lightning, data link weather, TCAS and TAWS-B.

Why Bendix/King?

At Honeywell, we have proven support for our Bendix/King Avionics and are leaders in the aviation industry. Our reputation for innovation, reliability and service are unmatched. And Honeywell's global customer support system worldwide means that whenever you need support of Bendix/King avionics, we'll be there.
